## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “selectively coupling a power source from two or more power sources” in claim 1 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 112***

2. Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In claim 1, line 3, “selectively coupling a power source from two or more power sources” is a new subject matter. The application including a new subject matter should be filed as a Continuation-in-part of the application.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who

Art Unit: 2838

has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. As best understood, claims 1, 6, and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Hawkes et al (6,181,120 – cited in IDS).

Hawkes et al discloses a method of coupling a power source to an input of a DC/DC converter; and creating a droop in an output signal to the load in response in part to a signal from the power source and in response in part to the operating mode of the load such that the amount of droop in the output signal is based on the operating mode of the load; wherein creating the droop in the output signal further comprises controlling a gain of a buffer amplifier in a feedback loop with a frequency signal proportional to the frequency in which the load operates; and wherein the frequency signal is derived from a reference voltage, wherein the reference voltage is associated with a desired operating voltage of the load (see figures 2 and 3; col.5, line 54 thru col. 6, line 34).

5. Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
